

FieldTurf Signature Series® Putting Greens

FieldTurf putting greens are the state-of-the-art solution to the high maintenance costs, poor grass quality and intensive care required to keep real-grass, natural or sand greens in playable condition. They completely eliminate the risk of loss due to disease, poor air circulation and frequent traffic.

FieldTurf putting greens are the product of extensive research and development efforts. Hundreds of methods and materials have been tested, resulting in performance that is, without doubt, the closest to natural grass available today.

In use, FieldTurf “holds” the ball upon impact and gives the golfer the desired response, according to the selected approach shot. In addition, FieldTurf putting characteristics are predictable. Players feel like they are on real grass. The putting speed is adjustable—fast, medium or slow—according to “stimp” meter readings. And because FieldTurf greens can be designed with the same contours as natural greens, players can “read” the greens, just as they do on any natural surface.

In commercial situations, FieldTurf putting greens increase club revenues by extending the season in spring and fall. Available to replace greens at commercial, municipal and private courses, FieldTurf is the finest alternative to natural grass. We stand behind our products because we have created the very best synthetic golf greens in the world. That’s why FieldTurf putting greens are warranted for a period of five years, for both performance and wear.

Although more expensive to install than natural greens, FieldTurf greens reduce maintenance costs so dramatically that the typical break-even period, including construction, is just two years.

FIELDTURF SIGNATURE SERIES® FEATURES:

- Putting surface “holds” the ball to practice short-game shots
- Predictable putting, even on downhill lies
- Long lasting, with an estimated lifespan of fifteen years or more and warranted for five years
- Virtually maintenance-free; occasional brushing is all that’s required
- Resilient to golf-cart wear-and-tear
- Immune to temperature extremes
- Dries quickly and is playable when wet
- Pin placements can be pre-set to relocate
- Special cup design and installation assures long-lasting quality
- Extremely resistant to damage and wear
- Severe sloping is a design feature
- “Speed” of greens is adjustable
- Non-permeable or permeable
- Suitable for indoor use
- Maintains playing qualities year after year
- Maintains natural-grass look twelve months a year
- Five-year performance-and-wear warranty
- Made in Canada and the United States
- UV treated polypropylene fibers
- Specially graded silica sand, granular material, plus Nike Grind®
- No sub-surface parts to collapse or deteriorate
